To whom it may concern

Re: WS Civil Engineering

I have known and worked alongside WS Civil Engineering for 18 months on the East Midland Signalling Renewals Contract in Nottingham. WS were taken on board as a subcontractor to complete REB works, Troughing Route Works, LOC installation and installation of UTX Works.

As Project Manager for Works Infrastructure, I worked closely with both Shaun Westgarth and John Sparks to make sure that the needs and standards of Network Rail were not only met but exceeded. The East Midlands Signalling Renewals contract was a rather challenging project, therefore effective coordination and communication was crucial in completing the project.

Throughout the project WS have proved themselves to be committed to the contract goals, going above and beyond the expectations of the client. They have remained professional throughout their time on the project, producing high standards of work. Shaun and John committed themselves full time to the project and regularly visited the sites to help coordinate any required changes as they were discovered while ensuring that our construction schedule was never compromised.

The cooperation and collaboration that Shaun and John brought to the table everyday was greatly appreciated. This atmosphere resulted in a truly enjoyable project experience for everyone involved, a successful end result and a very pleased client. I look forward to the opportunity to work with WS Engineering again.

Yours faithfully

Neal Burrows
Project Manager
