Re: WS Civil Engineering

I have worked alongside WS Civil Engineering over the past 18 months on the Network Rail Security Enhancements project. WS Civil Engineering has completed the following projects during this time:

- York PSB
- Swindon PSB
- West Hampstead PSB
- Upminster PSB
- Waterloo PSB
- Victoria PSB
- Sudbrook Pumping Station

The works involved in the security enhancements project included the installation of reinforced static bollards, shallow blocker units, hydraulic bollards, control cabinet bases, traffic light and card reader bases/ columns, CCTV bases/columns and all associated buried routes.

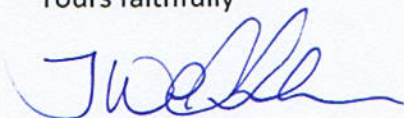

In addition to this WS have assisted with various other minor civil's works in the London and surrounding areas such as tarmac resurfacing, thermoplastic screeding, and various remedial works.

WS Civil Engineering had to work to a tight schedule in order for the works to be completed before the commencement of the London 2012 Olympic Games.

I have worked alongside John and his team over the last 18 months and they have all been fully committed to the project in hand, John has always remained on site to oversee the project and the team have overcome any problems that may have arose, and done so in a professional and timely manner.

It has been a pleasure to work with WS Civil Engineering in completing these projects and I would like to thank John and his teams that worked on the Security Enhancements. I look forward to working with WS Civil Engineering in the future.

Yours faithfully
